Art Unit: 2616

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1,7,9,11,17, and 19 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1,4,5,11,14 and 15 of U.S. Patent No. 6,667,982. Although the conflicting claims are not identical, they are not patentably distinct from each other because replacing the DTMF signals having the called number with the signaling would have been obvious to one skilled in the art since any types of signaling can be used to set up the connections between the source and the destination. The following is the comparison between the claims in the instant application and the claims in the patent. The step of receiving signals --- in the bearer interface, processing the called number --- identifier, and transferring --- the bearer interface is the same as a signaling processor configured to receive --- an identifier

indicating the selected connection; receiving the user communications --- based on the identifier is the same as a bearer interface configured --- user communication.

Regarding claims 7 and 17, the limitation "the receiving the user communication - --GR-303 format" is the same as in claim 4 and 14.

Regarding claims 9 and 19, the limitation "the identifier comprises --- identifier" is the same as in claims 5 and 15.

Regarding claims 2-6,12-16, using echo cancellation, compression technique, voice detection, voice messaging are well known in the art.

Regarding claims 8,10,18 and 20, using the processor which is external to the switch to process the signal would have been obvious to one skilled in the art in order to setup the connection.

NOTE: The obvious type double patenting rejection can be applied to patent #s 6,631,133; 6,023,474; 6,304,580 and the application serial # 10/633,798. Applicant is requested to file the terminal disclaimers including the patent #s 6,631,133; 6,023,474; 6,304,580 and the application serial # 10/633,798.
